SAVE 30 TO 50%
on your heating bills and
reduce your carbon
footprint with an air source
heat pump system.

You're in good hands with...

Domestic Air conditioning

Air-conditioning is today a way of life, we love being in control. When it's too hot, we can press the button and.... hey that's cool! Everywhere we go, at work, at the gym, and even in our cars we have control over the temperature, so why not in the most important place in the world.... Your home?

How cool would it be in the hot summer months to have control over the temperature to ensure that your family can sleep well on sticky nights.... And how cool would it be to be able to use your beautiful conservatory all year round?

Instinctively we all know that air-conditioning cools, but it also provides a great source of heat and it's really practical. Each unit has its own time clock and temperature setting so you can heat or cool your rooms as and when you need to.

We've been installing air-conditioning units for the last decade in homes, offices, shops, schools, hotels and restaurants, so call us today to find out more.

We are specialist installers of all the major brands and will offer you a competitive quote designed and specially tailored to your individual needs.

So why not contact us today?

...getting you on track for a greener future...

Air source heat pumps

Living in the country is a dream, but our rural location means that we're not all connected to mains gas and heating our homes in an economical and environmentally friendly way is a task.

However, thanks to advanced technology, our expert technicians are now installing the very latest state of the art, economical and energy efficient heating system new to the UK.... **Daikin Altherma air source heat pump**.

Air source heat pumps are **the** energy efficient home heating systems which are available as both low and high temperature systems. So, whether you're completely replacing your central heating system or simply needing to replace your boiler, there's an air source heat pump solution that's suited to both your personal and financial needs.

The altherma is 3-5 times more energy efficient than conventional heating systems, 300% more efficient than gas and oil fired boilers... so there's a 30-50% reduction in CO₂ emissions and up to ¾ of the heat generated from the altherma is from a renewable source... the air around us.

So here it is... **the answer to providing home heating in an efficient and environmentally friendly way, that's also easy on your pocket.**

Why don't you see for yourself the benefits of our heating and cooling systems, call us today and take advantage of our free no obligation survey!

- ✓ Low running costs
- ✓ Low maintenance
- ✓ Low noise and unobtrusive
- ✓ Ideal for properties not on mains gas
- ✓ Suitable for houses and apartments
- ✓ Meets and exceeds CO₂ reduction targets
